

1993 EC&M INDEX

Articles by Month

Article title

JANUARY

How the new Energy Law will affect you
 Introductions and definitions—Articles 90 and 100
 New monitors for existing power distribution systems
 How the new Energy Law affects your motors
 Single point grounds and electronic drives
 Nonmetallic constructions in hazardous locations
 Hipot tests assure power cable reliability
 Choosing the right transformer — Part 4
 Replacement snowmelting system serves pedestrian bridge
 Office tower floodlighting brightens Chicago's nightscape
 Can dimmer switches be wired with power on?
 Parallel equipment grounding conductors
 Basic calculation shortcut
 1992 editorial index
 New leadership for the NEC committee

FEBRUARY

Who do you believe?
 New power quality consensus standard
 Requirements for electrical installations—Articles 110
 Understanding vibration analysis for longer motor life — Part 1
 Twistedpair cable can support 100 megabits/sec speed
 Power quality, how bad is bad?
 Designing branch circuits for the computerintensive office
 Applying voltage surge suppression devices
 Harmonics terminology: fact and fiction
 Green lights program formula boosts lighting efficiency
 Receptacles near outdoor spas
 Is there a difference between AC and DC ampacity?
 The basics of conductor areas
 TIA on lightweight armored cable rejected

MARCH

Trade Center blast — they were lucky!
 Common causes of vibration — Part 2
 Fire protection engineering and NICET certification
 Use and identification of grounded conductors — Article 200
 Beware of corruption of computer signal systems
 New factory sealing methods for hazardous locations, using nonmetallic materials
 Update on the new fluorescent ballast designs
 Transformer failures: what options do you have?
 Magnetic fields from water pipes
 Retrofitting loudspeakers in an existing paging system
 Safety switches stand up to tough mine environment
 Lighting retrofits gain high marks in Ohio schools' energy conservation program
 Advanced lighting system used in recycled building
 Hospital cures costly computer crashes with UPS array
 UTP cable has 100 Mbit/s capability
 Medical center uses manufactured cable sets
 Can demand/diversity factors be used to size a generator supply?
 Comment: UL does not test devices containing MOVs
 Does Table 310-16 always apply?
 The basics of short-circuit current calculations
 Draft reinspection code open for comment

APRIL

Be careful what you ask for
 Branch circuits — Article 210
 Long term power disturbance solutions other than a UPS
 How EPA's "Green Lights" Program works
 Common causes of vibration — Part 3
 What to know about digital multimeters

Article title

How did peculiar shaped receptacles happen?
Why is SER cable so popular in apartment buildings
Comments: dimmer switches can be wired hot
Normal power in operating rooms
The basics of voltage drop calculations - Part 3
NFPA meeting endorses new National Fire Alarm Code

AUGUST

Energy: a responsible approach to this vital need
Lightning disruption through earth
An overview to the EIA/TIA standards
Plant energy monitoring: new developments and advantages
High heat hurts motors
How to select a cablebus system
Branch-circuit and feeder calculations-Article 220
The how and why of short circuit studies
Reducing electric utility costs
Installing primary and secondary distribution at a major stadium
D.C. design firm puts spotlight on its historic landmark
Retrofitting a MV power distribution system at a military base
How to avoid problems when grounding a standby generator
Routing equipment grounding conductors on MV circuits
The basics of conduit fill calculations
Corrections studied on EMT in earth

SEPTEMBER

"Greening" tomorrow's computers
Services - Article 230
Lightning strikes and traveling waves
Maximum short-circuit protection for motor circuits
Flooded motors: What to do?
Fiberoptic cables for process control
Renovating water-soaked motor control/adjustable speed drives
Multimode glass-in-ceramic FO connections made easy
Dangerous delusions about power system protection
Pulling and installing fiber optic cable
Servicing solid-state power supplies
Applying voltage surge suppression devices
Monitoring and trouble-shooting capabilities enhance a power distribution and control system
Can HPS ballasts and starters be remote from lamp?
Open conductor clearances from platforms
The basics of vector analysis - Part 1
Electrical standard to look European?

OCTOBER

The demise of 1,1,1
Overcurrent protection - Article 240
